

Vuzix VR920 Software Update brings Second Life to life, supports 8 new titles and adds 64-bit support.

New software release v2.3 for Vuzix iWear® VR920 offers expanded game support, native support for Second Life, plus 64-bit support for XP and Vista systems using virtually any make and model of graphics card.

Rochester, NY – September 24, 2008 – The latest software release from Vuzix Corporation, for its award winning iWear® VR920 virtual reality headsets, is its most significant overhaul to date. It provides support for 8 new titles, plus native support for Second Life, a 64-bit signed driver package for XP and Vista, and user interface improvements.

With this release, the iWear® VR920 video eyewear supports 89 games and other applications on all versions of Windows XP and Vista. The new titles added to this release include:

- Age of Conan
- Goliath
- Madden NFL 2007
- Madden NFL 2008
- NBA Live 2007
- Toblo
- Tomb Raider Anniversary
- WarBirds

As part of the Second Life development community, the Vuzix engineering team, with this release, has created a native mode Second Life Viewer that is compatible with both the v1.19.1.4 and v1.20.15 releases of Second Life. Native support means that the VR920 can now be used to its full potential in Second Life, bringing its worlds to life with full 3D stereoscopic video and head tracking.

The addition of a 64-bit signed driver set for XP and Vista is provided in answer to heavy demand both from dedicated game and simulation users as well and the software development community.

Announcing the improvements, Vuzix President, Paul Travers said: "We are committed to keeping the VR920 headset ahead of the game by ensuring the VR920 is compatible with the latest games and leading internet applications. Inhabitants of Second Life can now immerse themselves in a true stereo 3D environment and view it intuitively with the latest head-tracking technology – you can now literally step inside Second Life.

“Our success and continued support from the software development community has meant our list of supported titles has become extensive and the user interface improvements in this latest version of VR920 software will make is very easy for users to manage this list.” concludes Travers.

The new iWear® VR920 v2.3 software is shipping in new iWear® VR920 orders and is available as a free download from www.vuzix.com for all iWear® VR920 customers.

Winner of the 2007 CES Innovation award, the iWear® VR920 video eyewear is the world’s first, affordable, fully immersive virtual reality headset to offer full head-tracking and 3D video capabilities.
