First Smart Glasses with Dedicated XR1 Platform

We are pleased to announce the debut of Vuzix’s next generation enterprise smart glasses, the M400. Based on the industry leading M-Series platform, the M400 features the newest Qualcomm® Snapdragon™ XR1 platform. Snapdragon XR1 is the first dedicated XR platform from Qualcomm Technologies designed to accelerate high quality video, audio, and interaction experiences on smart glasses. Vuzix’s focus on wearability, experience, and form factor, combined with the power of the XR1, will drive smart glasses performance and functionality to the next level.

The Snapdragon XR1 platform integrates Qualcomm Technologies’ heterogeneous computing architecture, including an ARM-based multicore Central Processing Unit (CPU), vector processor, Graphics Processing Unit (GPU) and Qualcomm® AI Engine. The Snapdragon XR1 allows for power efficient on-device processing of vision-based machine learning algorithms that can help with key Augmented Reality (AR) use cases like superior pose prediction, object classification, etc. The Snapdragon XR1 platform is also designed to deliver an immersive User Interface (UI) experience, with features such as native voice processing, motion tracking, head tracking and more.
